

neural  
foundry

## Pitch Deck

H1 2025  
Version 2.2

## Problem Statement

Across industries, up to 60% of time is spent on manual, repetitive tasks, driving up costs and errors.

Skilled Professionals are tied to routine work, highlighting the need for intelligent automation.

# Mission Statement

At Neural Foundry, we integrate **Intelligence,**  
**Robotics & XR** to automate complex and  
manual workflows across industries with our  
*products.*

# Challenges We Solve

Enabling Enterprises where **Devices, Systems, and Humans** collaborate effortlessly

- Simplified **Communication Protocols**
- No More **Bespoke Logic**
- Amplified **Consistency**
- Maximized **Automation between Devices**

# About Us

Our products - **URP, Alex, and RAVEN** enable seamless, scalable, and intelligent workflows to modernize traditional industries' automation.

## Cientele Persona

Clients Served: 11

Industry Expertise in

Pharmaceutical

Industrial Automation

Agriculture

Real Estate

Financial  
Growth

Revenue till date : \$1M+

# Market Analysis

**\$12.7B**  
by 2025

Assuming the overall automation market size across all sectors is projected to be **\$12.7 billion by 2025** and considering that only 10% are fully leveraging automation, the remaining 90% represent an attainable market of approximately \$11.43 billion across all sectors.

**48%**  
\$25M+

Companies are increasingly prioritizing automation investments, particularly in logistics (**48% planning \$25M+ investments**) and retail (**54% with similar plans**), seeking rapid cost efficiency.

**40%**  
Pharma

With 60% of companies planning to automate chemical processing and data management for streamlined production and optimized resource utilization operational efficiency **is set to increase by 40%**

**38%**  
\$100M

**10%**  
established  
strategies

Despite substantial projected automation investments across various sectors, including logistics, retail, life sciences, automotive, and food, with up to **38% planning over \$100 million investments**, only 10% have established comprehensive automation strategies.

# Financial Performance

Driving revenue through multi-year engagements with enterprise clients and an innovation-led go-to-market strategy. Our **state-of-the-art solutions** align with target customers, ensuring **sustainable growth and competitive positioning**.

## Investment Overview

Neural Foundry is seeking £2m in growth capital.

Driving growth in key Middle Eastern and European markets, enhancing client value, and investing in R&D and engineering to advance the Alex, Raven and URP.

Investing in skilled engineering talent to maintain superior product quality, focusing on high-precision solutions and robust tech support

Financing the roll out of its £4m order book over the next 12 months

*The Company is S/EIS qualifying for UK investors*

# Founding Team

A First-Class Honors graduate in Computer Science from the University of Warwick, specializes in machine learning and data visualization. Known for his technical expertise and innovative mindset, he ensures Neural Foundry stays at the forefront of advancements in AI and ML. His achievements include securing the “Best Project Award” from Morgan Stanley, where he stood out among 300 students as one of the Top 5 performers.

Nikhil  
Kalamannil  
CTO

Dhruva  
Konidena  
CEO

A First-Class honours graduate from the University of Warwick, is celebrated for his problem-solving skills with over 6 years of cumulative experience. An IndustryWired 30 Under 30 honouree, he co-founded Neural Foundry to pioneer AI-driven automation. Winner of Deutsche Bank’s “Best Project Award,” Dhruva has led Neural Foundry to global acclaim, ranking among London’s Top 20 Robotics Startups and Web Summit’s Top 7 Innovations.

# Demonstration Snippets

# Automating QC Workflows with Alex

Product(s): URP, Alex

Pharmaceutical

India

## Impacts Delivered

4x

### Faster Workflows

Saved 180 minutes per preparation cutting time from 240 to just 60 minutes.

90%

### Reduction in manual interventions

Cut from 81 to just 8, 73 fewer human touchpoints

75%

### Reduced human effort

Enabling teams to focus on critical, high-value tasks instead of manual handling

QC analysts spend 6 hours daily on manual prep, slowing workflows.

90% of tasks are manual, wasting skilled resources

Automation is limited, keeping critical steps manual.

80+ touchpoints per batch raise contamination and inconsistency risks.

Inconsistent quality and low throughput impacting compliance and productivity

Challenge

Solution

Alex, powered by URP, automates preparation workflows with selected pharmaceutical hardware  
Predefined Action Files standardize sample, standard, diluent, and mobile phase prep

Analysts create and modify Action Files, ensuring flexibility without technical expertise

URP enables centralized control and real-time monitoring of all devices.

Industry Grade Hardware, and rigorous audit trails ensure compliance with regulatory standards

# Automating Hazardous Workflows with Robotics and AI

Product(s): URP, Robotic Solution  Steel Manufacturing, Industrial  Spain

## Impacts Delivered

100%

**Elimination of manual paddling over a 15m molten metal launder—zero human heat exposure.**

**Safer work environment**

significantly lowering risk of heat-related injuries and operator fatigue

80%

**Reduction in process variability,** achieving consistent, controlled molten flow

Operators manually paddle molten metal through launders—a high-risk task.

Exposure to extreme heat and dangerous conditions during every batch cycle.

Inconsistent paddling disrupts metal quality and process stability.

No real-time monitoring—metal flow and paddling untracked

Safety risks, fatigue, and operational inefficiencies due to manual intervention.

Challenge

Solution

Custom robotic paddling system powered by URP, fully automating the molten metal movement.

Mechanical automation to perform consistent, controlled paddling along the launder.

URP-integrated sensors provide real-time metal flow and system health feedback.

URP enables centralized control, monitoring, and intervention.

A step toward a no-human molten metal plant, enhancing safety, consistency, and efficiency.

# AI-Powered Cleaning Robots with Vision-Driven Tasking

Infosys

OCS

Product(s): URP, Robotic Solution, AI Engine 🏪 Retail, Public Spaces, Large Facilities 📍 UK, Germany

## Impacts Delivered

### Higher ROI

From existing robots and CCTV ensuring fully utilized assets

Cleaning robots run 12+ hours daily, wasting 50-70% time on clean areas.

No real-time spill or waste detection, delaying critical responses.

Supervisors spend 6-8 hours daily monitoring, straining operations.

Robots and CCTV lack integration, missing real-time cleaning activation.

High costs, low ROI due to inefficient robot use and oversight.

70%

Reduction in unnecessary robot usage  
Cleaning only when needed

80%

Reduction in manual supervision hrs  
Minimal human monitoring

Scalable

No additional hardware required

Challenge

Solution

URP integrates CCTV and sensors, using AI to detect spills and waste.

URP dispatches cleaning robots only when needed via AI detection.

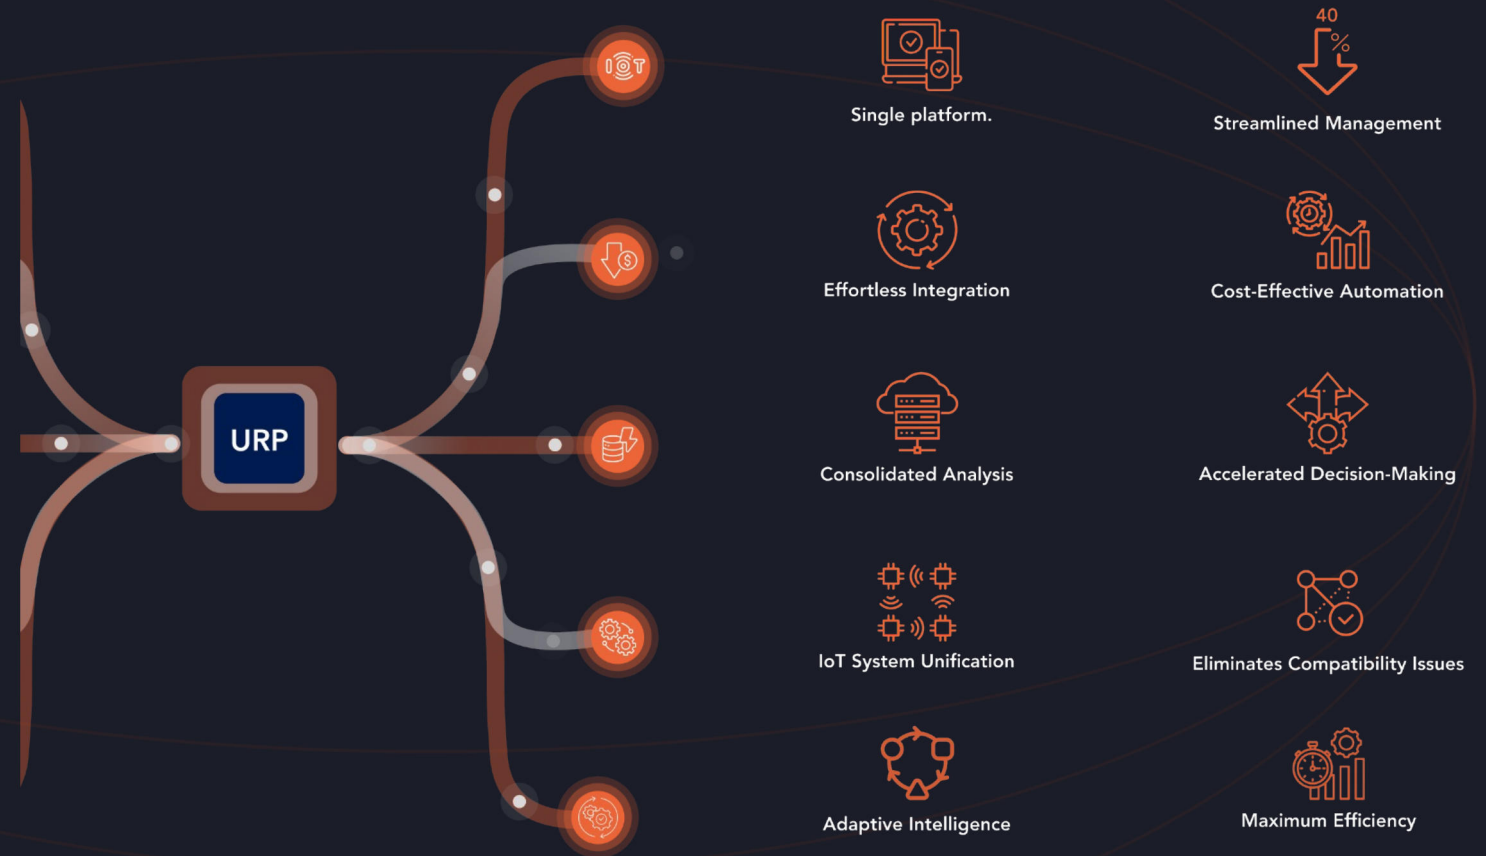

URP's AI enables targeted robot deployment without human input.

AI learns patterns to enable predictive cleaning workflows.

Supervisors can oversee or intervene, minimizing manual effort.

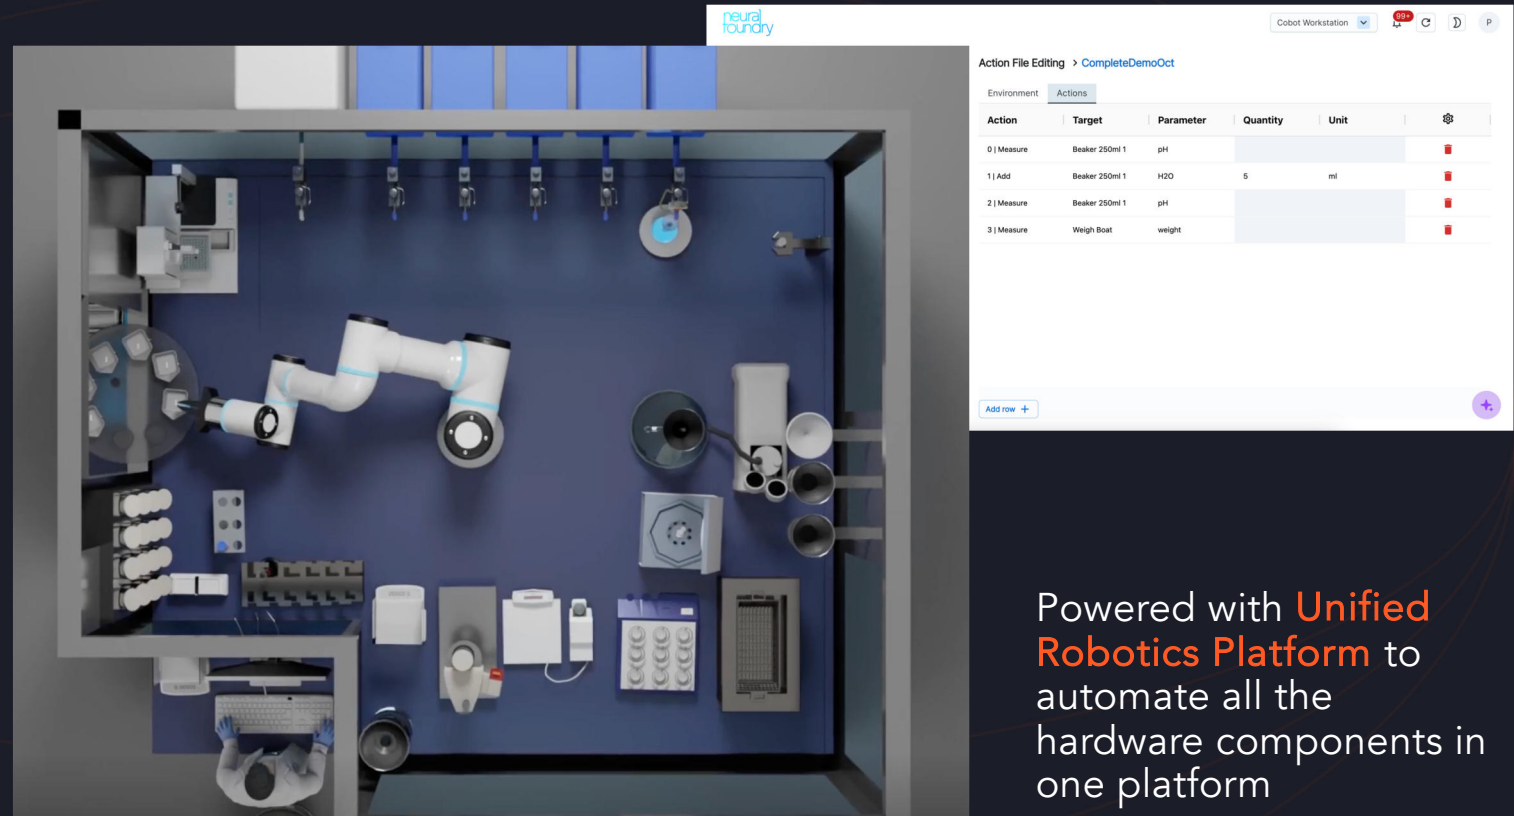

# Unified Robotics Platform

**Cluttered Devices.**  
**Scattered Databases.**  
**Endless Protocols.**

# Introducing Alex.

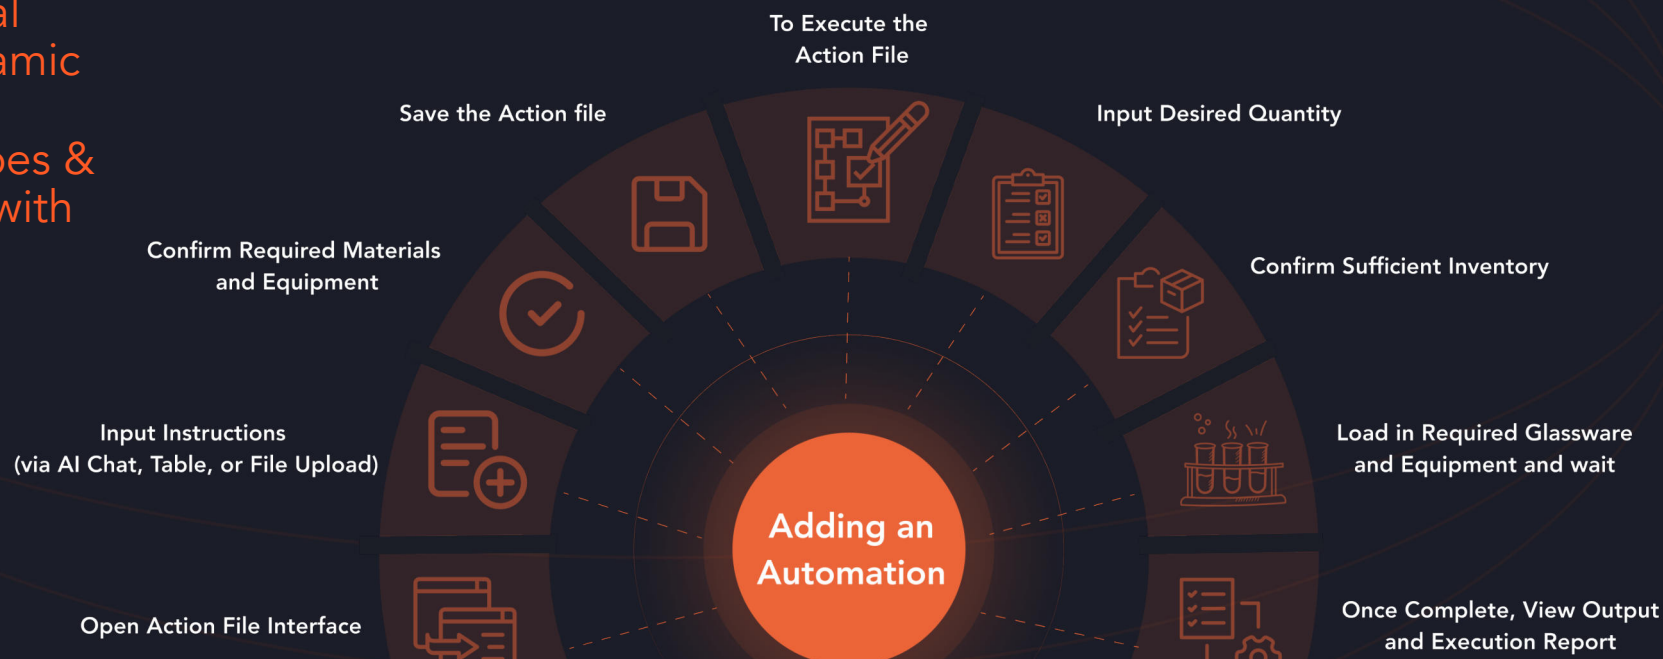

Workstation with configurable hardware components assuring modularity and flexibility.

Powered with **Unified Robotics Platform** to automate all the hardware components in one platform

# Alex Workstation

AFI – Action File Interface  
Transforms Manual  
Processes to Dynamic  
Automation with  
configurable recipes &  
processes set up with  
URP.

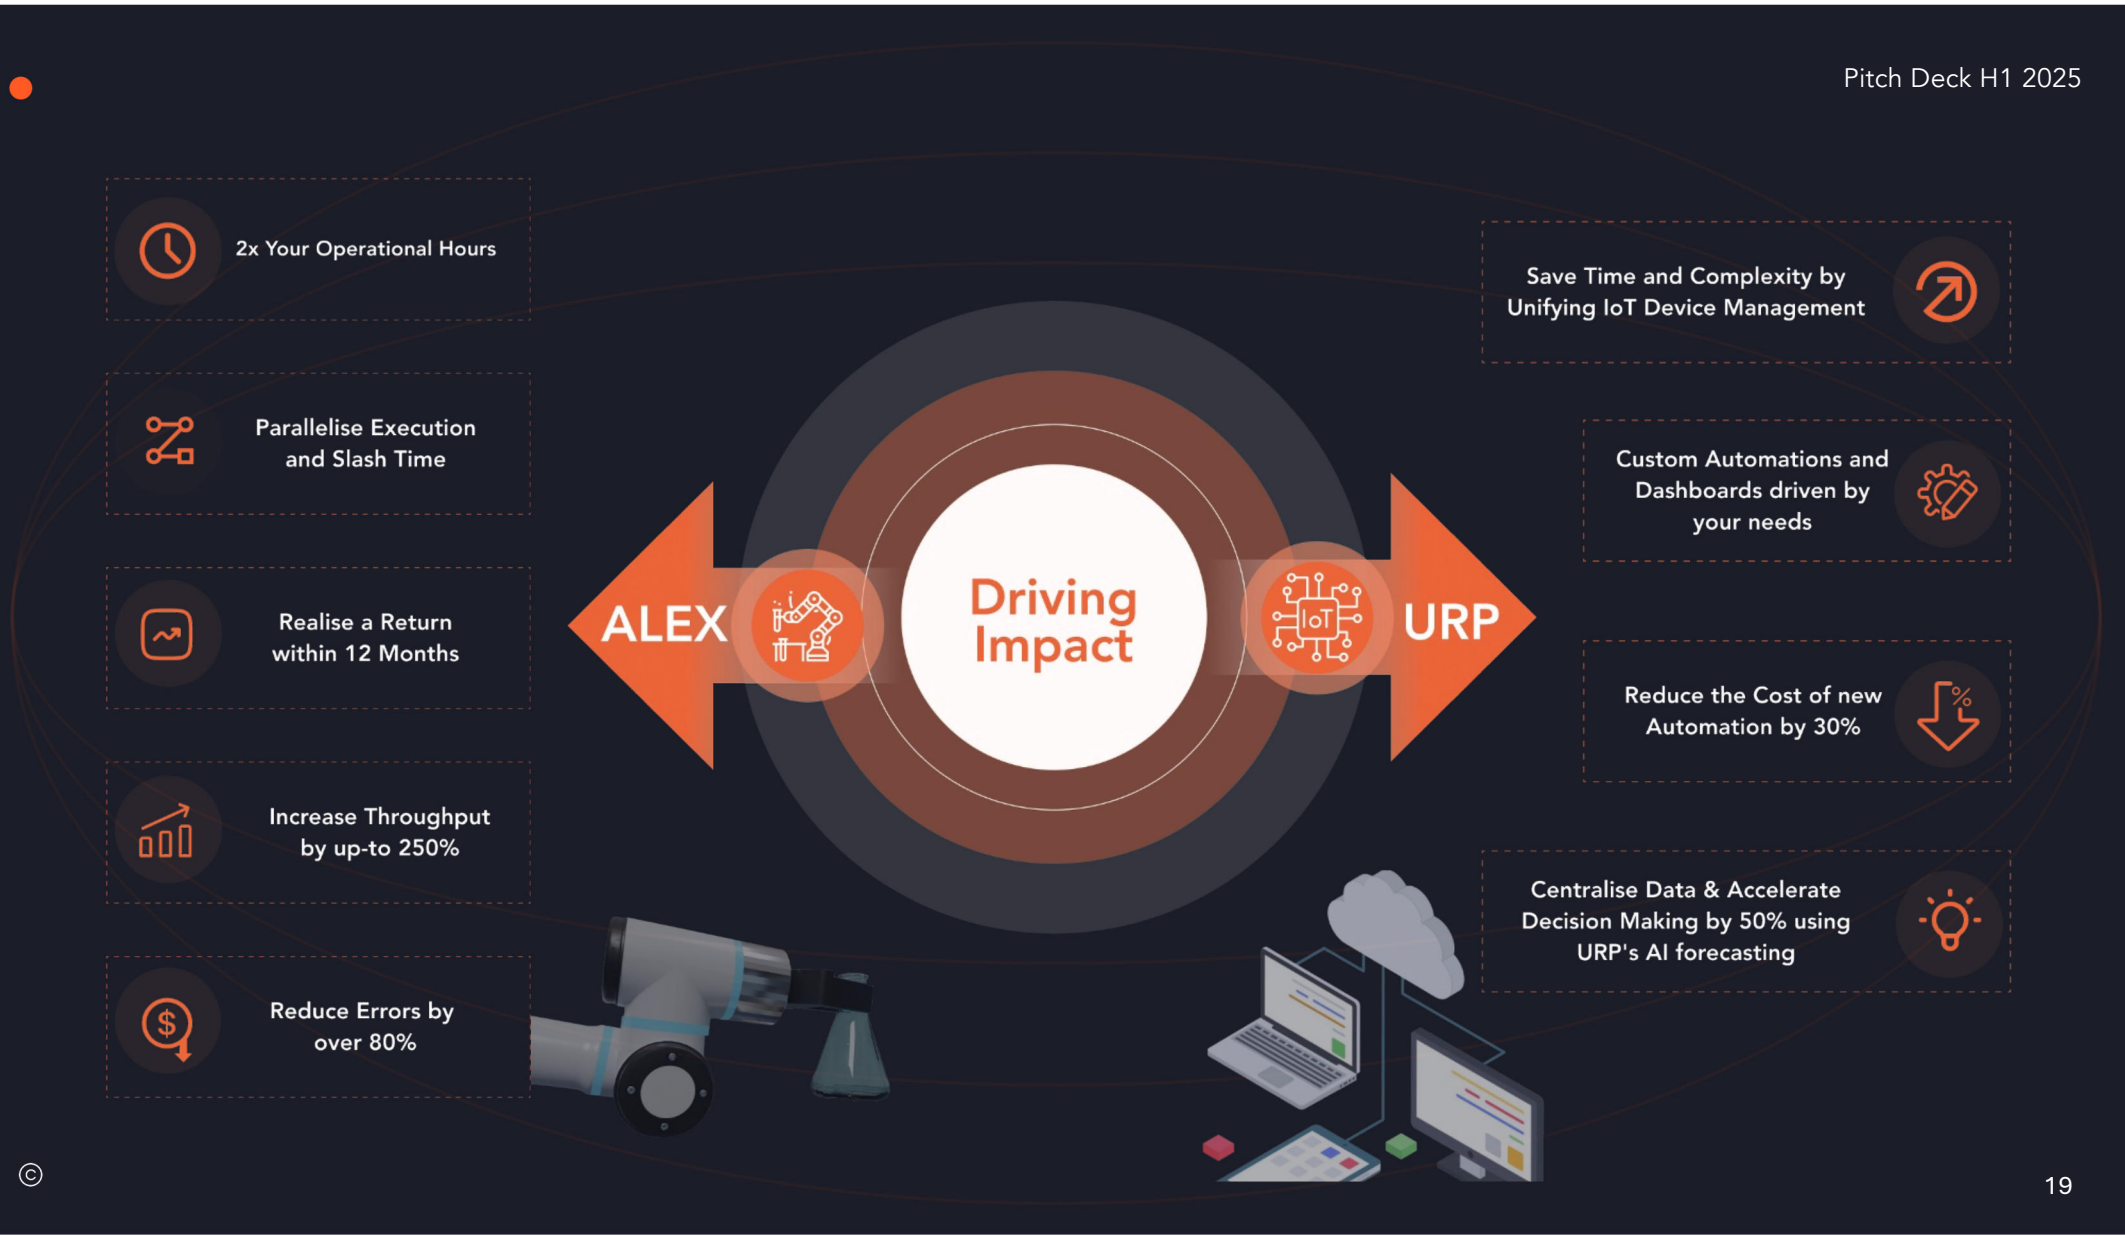

# URP + Alex in Harmony

The screenshot displays the Neural Foundry Cobot Workstation interface. The top bar shows 'Cobot Workstation' with a dropdown menu, a notification bell with '27', and icons for refresh, home, and profile. The main interface is divided into several sections:

- Home Section:** Displays 'Last Active: 10/3/2024, 6:02:54 PM' and a green 'Active' status indicator.
- Location:** Set to 'Lab1'.
- Environmental Data:** Temperature is 25°C and Relative humidity is 60%.
- pH Meter:** A red-bordered box highlights the pH Meter section, showing a reading of 4.171. Below the reading is a color-coded scale from 0 to 14.
- Quick Execution:** Includes a 'Select Action File' dropdown and a 'Go' button.
- Activity Log:** A table showing the current status of the robot.
- Video Feed:** A live camera feed labeled 'Camera' showing a robotic arm in a lab setting.
- Execution Progress:** A progress bar for the file '98239822\_F...ample.json' at step 1/3, with 'Pause' and 'Stop' buttons.

Status	Message	Step	Time
●	working	1/3	10/3/2024, 6:02:10 PM

# RAVEN

## Robotic Arm Virtual Environment

A Virtual playground for controlling, training and enhancing the robotic operations.

### Cutting-edge technology:

Built on the powerful Unity engine, the application is designed to be robust and hold great potential for scalability.

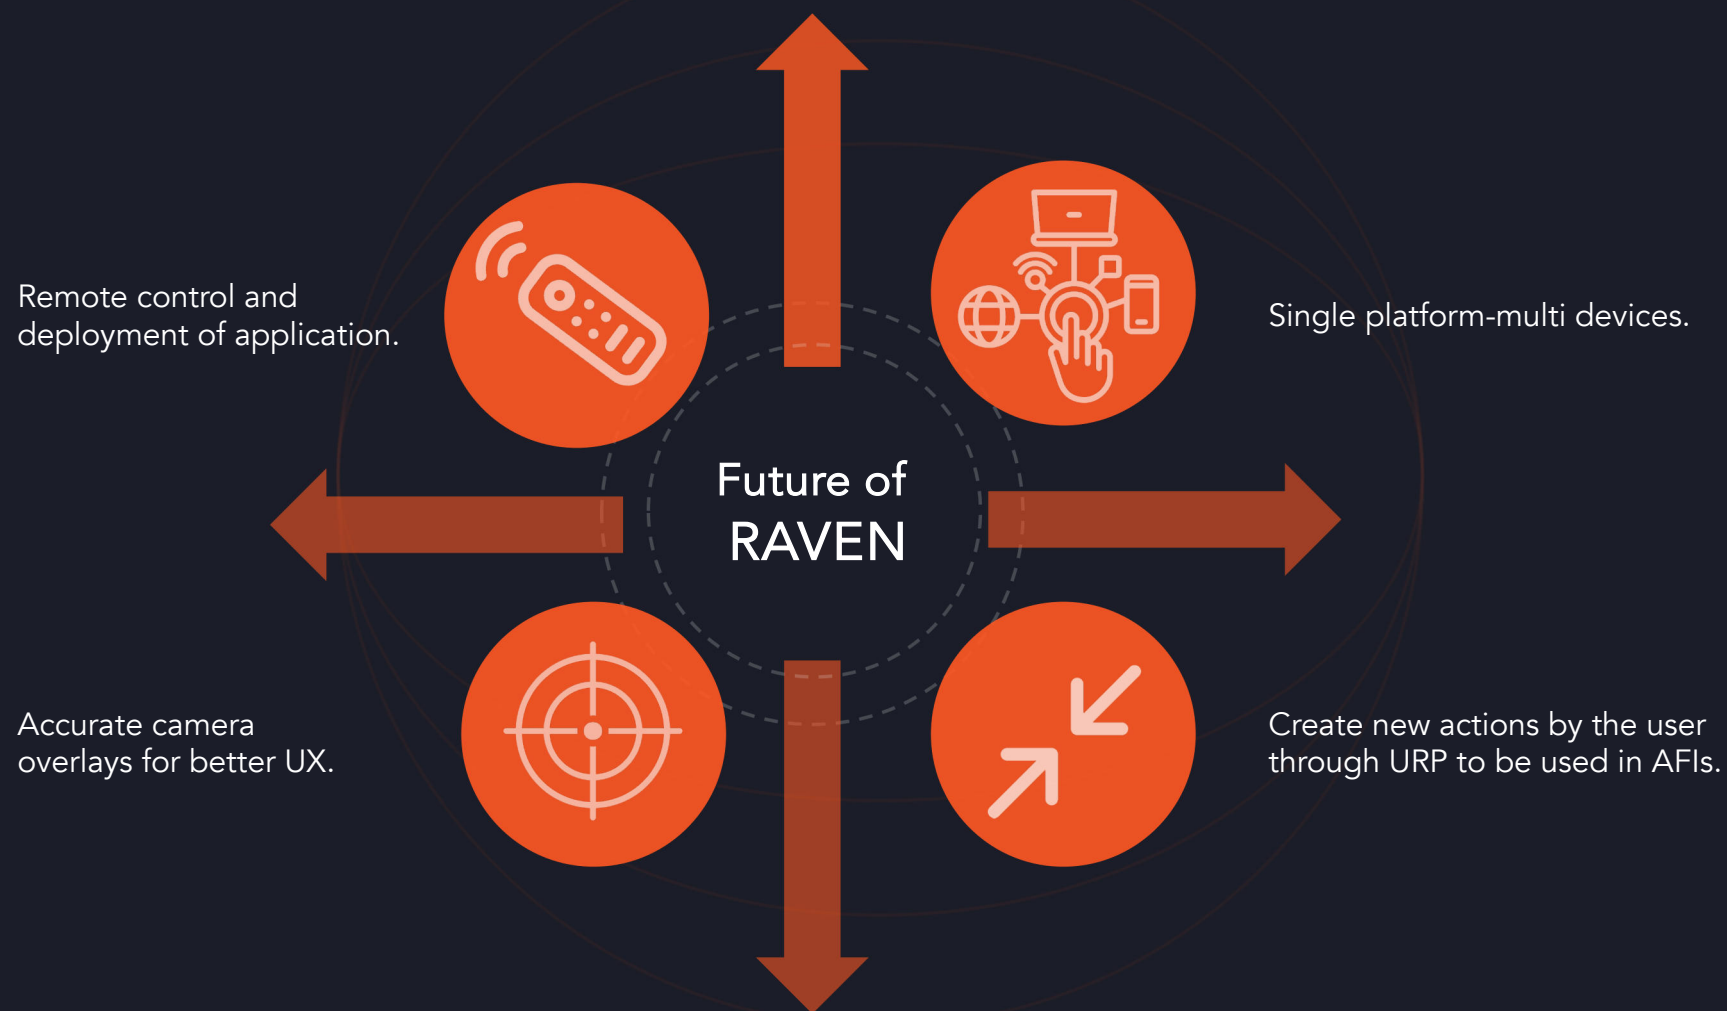

### Controlling:

Manipulating the COBOT is now made easier and intuitive through enhanced user experience, allowing manual actions through XR.
